

A flexible way to travel that suits your life style

[www.nationalcarshare.co.uk](http://www.nationalcarshare.co.uk)

"Lift sharing", "ride-sharing", "car-sharing" or "carpooling" -it doesn't matter what you call it, it boils down to the same thing - two or more people sharing a car to get from A to B rather than driving alone.

The benefits are numerous both for yourself, your family, your community and the environment.

You save money on running costs, you save time looking for parking spaces and you help to save the planet by reducing your carbon footprint.

If everyone who drives on their own to work every day were to catch a lift with someone just once a week, the commuting car journeys would reduce by 20%! And both parties would save money!

Car sharing is becoming increasingly popular as the benefits are acknowledged, and many communities and employers are introducing carsharing schemes.

On a 10-mile journey, the average car will produce 3.6 Kg of carbon dioxide, - the equivalent of just under 1 Kg of carbon. Source: National Energy Foundation.

Want to reduce your commuting fuel cost by 50%?

Easy. Share your journey with a colleague - or even with someone in the building next door!

Need a lift?
